                                                                                                                                                                           A novel human protein (89958) induces interfer or-damma (IFN-damma) prodon by immunocompetent cells to prodon set by induces the cytotoxicity of killer cells addyct induces the formation of killer cells (c.d. NK cells) lymphckine-activating killer (IAK) cells, and cytotoxic Treells). Recombinant IFK-damma inducer protein can be produced in high yields using host cells, esp. Escherichia cell, transformed with a vector carrying the encoding cDNA (T32402). It is useful as an antiviral antitumor, antibacterial, immunorceptiatory and blood platelet enhancing adent, and can be used in adoptive immunorhorapy It is also used to raise monoclonal antibodies. A full length sequence is given in K99560.

A novel mouse protein (F99559) induces interferon-gamma (IFN-gamma) produced by immunocompetent cells. Its sequence was deduced from that of a cUNA colone (13403) isolated from a mouse liver library Emomblement IFN-damma induces protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a vector assignment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EP-711

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 6. Page 41-42: 48pp. English.

The mature portion of a nevel bused protein (ABSE)) induces interferon gamma (IEM-gamma) produce by immunocompetent cells. It is the product of a cinA clone (ISA404) obtd. Itom a numun liver likrary. The profess containes the greatexistic of Eller cells and/or induces the fermation of the greatexistic (e.g. NE cells lymphokine activating killer (LAK) cells, and cytotoxic Tecels! Lymphokine activating killer (LAK) is useful as an antiviral ontitumer, antibacterial, immunocepulatory and blood plattlet calinoistic jace. Tel to be used in adoptive immunotherapy. It is also used to raise menoclonal antibodies.
                                                                                                                                                                                                                                                                                                                Example A.3-6; Page 17: 48pp; English.

Example A.3-6; Page 17: 48pp; English.

Tryptic peptides (F9956) and F99562) correspond to amino acids 79:10 and 140; Respectively, of a novel interferon gamma (TENgamma) inducer protein identified in mouse liver. The Ferrish and the amplification of mouse liver CNNA, leading to utilised in the amplification of mouse liver cNNA, leading to the isolation of a number of a current of a current of the isolation of mouse liver cNNA.
                                                                                                                                                                                                                                                                   induced protein (R99559).

This sequence represents a protein which induces interferon-damma probabilities in immunoscompetent reals. This protein may be used as production in immunoscompetent reals. This protein and treatment of the major component in a drug for the prevention and treatment of e.g. malignant tumcurs, wiral diseases, banterial hitcotions and

PS Chaim is Pauce 46; 60pp; English.
PS Chaim is Pauce 46; 60pp; English.
PS Chaim is the protein sequence of interferon gamma inducing factor-2
CC (IGLP-2). An IGLP-2 warrant (W2775) and an IGLF variant (W22049).
CC Which may be an ulternate transcript, also exist. Probes derived from the nucleic acid sequences can be used to guantify the expression of CG IGLP-2 in conditions that are associated with inflammation or aberrant expression of IGLP 2. The protein can be used to screen for compounds that interact with IGLF 2, such as antibles, antagonists or other can hibitors (Specially Tibograpes or antisense sequences) of IGLP-2
CC expression of IGLP-1 industry. The protein can also be used to diagnose, provent of treat IGLP-2 industry. The protein can also be used to diagnose, provent of treat IGLP-2 industry, expecially in relation to tissue damage associated with inflammation.

FIS Disclosure, Page 22, 26cp, English

CC The present sequence represents a newel protein from mouse liver cells, which induces interferent squamma (IIN gamma) production in immunocompetent cells, and induces their formalism. It is used as an actionabile agent for antifumour cells and induces their formalism. It is used as an actionabile agent for antifumour immunotherapy, an antiviral (including anti-AIES) or antibecterial agent, and in the free treatment of attable of immuno system discourses, e.g. asthma, and in the treatment of attable of immunotherapy or asthma, it is also cased to treat leukepaenia and thrombocytopaenia associated with complete the indictionability improves the insultingual immunotherapy. This novel protein significantly improves the insultingual immunotherapy, this novel protein significantly improves the insultingual protein significantly improves the insultingual and other cancers. When there administered to the patient (before comministeration of II-2) or by addition to the patient (before compared for return to the patient) are being grown.
                                                                                                                                                                                                                                                                                                                                                                                                                                               East Local Similarity 100.0%, a Matches 6; Conservative 9;

Fade 40. Supply Endison.

(IGIF 2) An IGIF 2 variant (W21757) and an IGIF variant (W21049), which may be an iterate transcript, also easier Produce derived from the novoleto acid sequences can be used to quantify the expression of IGIF 2 to conditions that are associated with inflammation or aberrant expression of IGIF 2. The protein can be used to stroke for corporate that interact with IGIF 2. Such as antibodies, antagonists or other inhibitors (especially ribotymes or antibodies, antagonists or other expression or activity. The protein can also be used to diagnoze, proven inhibitors (especially ribotymes or antisease expleness) of IGIF 3 expression or activity. The protein can also be used to diagnoze, proven it is that inflammation.

(Figure 193 AA)
                                                                                                  W46592:
21-MAY 1398 (first entry)
Amino acid sequence of human interleukin-1-gamma.
Interleukin-1-gamma, It-1-gamma, mouse, cytokine; IGIF, interleton-gamma; induction artifody dianosett assay, fusion protein, activity; immunological disorder; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel interferon gamma inducing factor 2—used to screen for compounds to diagnose, treat or prevent tissue damage associated

It is useful as an actual antitumor, antibarterial, immunoregulatory and led plateful encoding found to the used in adoptive numerotherapy. It is also used to take memorapy and actual to take memorapy and actual to take memorapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     As well man protein (R9958) induces interfeton gamma (IFN-gamma) products. In immunocompetent cells. It enhances the cytocoxicity of kilor collactor induces the forestion of killor colls (e.g. NK cells lymph-kine activating Filler (LAK) cells, and cytotoxic cells). Seconditional IFN-gamma inducer protein can be produced in body yields useful transformed that yield useful loss cells cells cells calls transformed to the cells cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 당고 N 플

By immune seperties the distantion of a state of seasons (132404) by immune seperties of a state of seasons (132404) by obtd. From a human liver library. The protein enhances the cytotexicity of killer colls and/or induces the formation of killer cells (e.g., Mx cells, lymphokine-activation (killer (189, cells, and cytotexic T-colls) The mature protein (see also 89958) is useful as an antivital antitumor, antibacterial, immunoregulatory and blood platelet enhancing agent, and can be used in adoptive indumotherapy. It is also used to raise monocional antibodies.

Claim 1: Page 9: 12pp; Japanese.

This sequence represents a protein which induces interferon-gamma production in immunocompetent cells. This protein may be used as the major component in a drug for the prevention and treatment of the major component in a drug for the prevention and treatment of
The present sequence represents a newel protein from human cells, which induces interfered gramma (ITM damma) production in immunocompetent cells. This protein chances cytotoxicity of killer cells and induces their formation. It is used as an antioncotic agent for antitumour immunotherapy, an antiviral (including anti-AIDS) or antibacterial agent, and in the treatment of atopic or immune system diseases, e.g. asthma, hayfever or rheumatism, when formulated with incorlockin-3, it is also used to treat leakopaenia and thromborytopeania associated with radiotherapy or chemotherapy of leukaemia and other cancers, when used in antitumout immunotherapy, this movel protein significantly improves the immunotherapeatic effect of interleukin-2 (II-2), compared with use of II-2 alone either when administered to the medium in which cells (interded for return to the feitent) are being grown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI: 9
                                                                                                                                                                                                                                                                               Human protein that indeeds interferor gamma prode in information color useful for adoptive immuno therapy of tumours and as antimicropial agent etc.

            malignant tumours or viral diseases

Claim 2: Pages 49-50: 74pp; English.

C The present sequence is a protein, which induces

C Interferon yamma (FN quamma) production in immunocomputent cells.

C Interferon yamma (FN quamma) production in immunocomputent cells.

The present has high biological activity, including enhancing expressed in manual resolution by immunocomputent or addition to induction IFN quamma production by immunocomputent cells when expressed in mammalian cells, facilitating its use in cells when expressed in mammalian cells. Facilitating its use in the diseases. As it is expressed in mammalian cells, facilitating its use in containing the used in fections and immune diseases. As it is expressed in mammalian cells, it also has low texticity when used in human treatments, minimising side effects. The DNA encoding the protein can be used in gene therapy, e.g. by injecting vectors containing the DNA or transplanting cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    is a first term damma (iFN-damma) inducing polypeptide sequence. policy of the induced IFN-damma production in immuneys, mportant of its polypeptide and a convert the procursor form of this polypeptide at this return form by cleaving a linkage between Asp at amino acid section of and type at amino acid position of of the precursor. The convert is the charmed from a human damma opoletic cell and can be controlled to by induced amido and acotyl-t-typesyl valyl Lalamyl-t-aspertic in the engage can be used to recomb a controlled and acotyl-t-typesyl valyl Lalamyl-t-aspertic in the engage can be used for cleaving a recombinant IFN-damma aspertic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              - AVK . .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HATE)
